with increased flexibility, the system both supports Windows and Linux operating systems with seamless integration and upgradability

### COMPREHENSIVE REPORTS
sales, government and ordering reports are automatically generated in just a few clicks!

## BACCHUS POS SOLUTION

The Bacchus POS system is a state of the art business solution locally developed for restaurant and fine dining management. It is designed to implement a complete waiter-ordering system solution that will eliminate the traditional cashier-based system by increasing front-liner control to improve efficiency and deliver better customer service. Its graphical user interface (GUI) provides an intuitive operation to make tasks from basic table arrangement and assignment, item ordering, serving dishes, down to check settlement seamless. The Bacchus POS system is a fully integrated system that builds a communication bridge between different stations such as front-line, kitchen, pantry, and management using the latest in object-oriented technology making it the leading POS solution for the restaurant and fine dining industry.

Now, you can further increase your ordering process efficiency with our tablet ordering system for Android™ for more accurate order taking and faster kitchen turnaround times. The tablet ordering system allows for a more flexible wait system from table reservations, item ordering, up to order customization right at the point of service.
